

# **Operating Systems Lab**

## **IPC - Pipes Lab Task**

***Instructor: M. Ahsan***

### **Task-1:**

Write your name and personal information in file and then display it on output using read and write commands.

### **Task-2:**

Create two different processes not in the same hierarchy, write such a program in which one process communicate with other using named pipes via read and write system calls. One process send message then wait for feedback message once feedback message received then send second message and so on.
